

AG-364

Airless Spray Gun

Achieve high quality results faster, easier and more efficiently

Introducing our new innovation — the *Binks*® AG-364 Airless Spray Gun — providing improved transfer efficiency and a useful method to maintain a cleaner machine.

Available in dead head or recirculation manifolds, this high-quality airless spray gun helps eliminate excessive paint waste and lengthy cleaning time. The AG-364 accomplishes ultimate transfer efficiency, resulting in: reduced overspray, cleaner machines and reduced applied coating cost per part. A softer high integrity fan pattern also allows for the consistent application of materials to detailed profiles and surfaces.

The tip holder indexes 45 degrees with insert and is completely adjustable without insert. The versatility of tips utilized on the AG-364 allows for application of multiple wood finish materials.

As a member of the proven AG family, the AG-364 makes it easy to upgrade from air assisted airless equipment. It utilizes the same pumps, fluid lines, regulators and fluid pressure ranges for a seamless transition.

FEATURES

- Increased transfer efficiency reduces overspray, time, materials
- Softer high integrity fan pattern creates consistent application
- Tip versatility allows use on a variety of wood finishes
- Tip holder indexes 45 degrees with insert (Completely adjustable without insert)
- Easy upgrade: Uses same parts as air assisted airless equipment
